PROFILE:

Python and Generative AI Developer with real-world experience creating backend-focused AI applications in the wellness, education, and healthcare industries using LLM and FastAPI APIs, data-driven reasoning, and organized, timely processes. Adept at converting product specifications into standardized AI workflows, well-structured data models, and clear Python APIs.

EXPERIENCE:

[Jun 2025-Present]

AI Engineer - FindFake Services , Navi Mumbai

- worked as an AI engineer, managing data preparation, model assessment, and inference integration for Python-based machine learning models meant to identify picture forgeries.
- incorporated learned models into application processes, obtaining practical knowledge of model-to-system integration and image processing pipelines.
- Leading the development of a cross-platform Flutter application while collaborating with the product team, I concentrated on scalable UI structure and clean architecture.

PROJECTS:

Exagram / ExaLearn – GenAI Education Platform | [\[GIT\]](#) | [\[DEMO\]](#)

[Feb 2024-Dec2025]

Python & GenAI Developer | Python, Flask, LangChain, Gemini API, Firebase, Next.js

- Developed a GenAI-powered education platform for question generation and AI-assisted learning support.
- Implemented structured prompt pipelines for quizzes, explanations, and course content generation.
- Built student dashboards for progress tracking and personalized learning paths.

NEURONET – AI-Powered Mental Wellness Platform | [\[GIT\]](#) | [\[DEMO\]](#)

[Nov 2025-Present]

Python, FastAPI, Gemini API, PostgreSQL, Web Speech API, Twilio

- Built an AI-driven mental wellness platform combining behavioral signals with GenAI-based coaching feedback.
- Designed structured prompt workflows to generate explainable session insights and summaries.
- Implemented safety-aware logic with keyword detection and automated alert flows for critical cases.

GustoGo – Custom Food & Cake Ordering Platform | [\[GIT\]](#)

[Jun 2025-Sept2025]

Python Backend Developer | Python, Flask, PostgreSQL, Stripe API

- Built a Python-based food ordering platform with complete backend logic using Flask.
- Implemented a custom cake builder with server-side pricing and validation.
- Designed PostgreSQL schemas and integrated Stripe payments with order state handling.

EDUCATION:

A.C. Patil College of Engineering, Navi Mumbai

B.E. in Data Science & Artificial Intelligence | 2022 – 2026

CGPI (Till Sem VII): 7.5

D.G. Ruparel College of Arts, Science & Commerce, Mumbai

Higher Secondary Certificate (HSC) | 2020 – 2022

Percentage: 55%

SKILLS & ABILITIES

Generative AI : LLM APIs, LangChain, RAG, Vector Databases, AI Backend Integration

Web Development : React.js, HTML5, CSS3, REST API Integration, Basic Node.js & Express.js, Next.js

Programming Languages : Python, JavaScript, TypeScript (basic)

Frameworks & Tools: Flask, FastAPI, React, TensorFlow, scikit-learn, Git, Firebase, PostgreSQL (Neon), Vercel, Google Cloud

ACHIEVEMENTS & CERTIFICATIONS:

- Smart India Hackathon (SIH) – Finalist
- 2nd Runner-Up at Avishkaar Season 2, a national-level 48-hour hackathon powered by GeeksforGeeks
- Winner of the inter-college project competition in
- Runner-Up in the GenAI category at INNOVATHON
- Complete Computer Vision Bootcamp With PyTorch & Tensorflow
- Full Stack Developer
- Mastering Prompt Engineering: Generate Text & Images with AI
